

SWE 642: Assignment 4/Group Project

Vue.js/REST APIs/JPA

Your next assignment/project is to re-implement Assignment#3 using Vue.js, RESTful Web Services, and JPA. You may be able to reuse your REST/JPA implementation from the previous homework. This project can be done in a group of 4.

Submission

The submission for this assignment should be through the University Canvas. I expect a zipped package containing a recorded video demonstrating the working code of your homework, documentation of what/how you did, source code files, jar file, and any additional packages, scripts, or files that you used. Only one submission per group is required. Please make sure to include all team members' name in the documentation and the recorded video. A late assignment carries a 10% late penalty for each week it is late. This assignment can NOT be accepted after the last week of the class. Make sure your name is on every submitted artifact, so we know who it belongs to. For every source file, please include comments at the top of the program describing what the program does. This only needs to be 1 or 2 sentences.

Grading:

The following areas will be used in the basic grading of these projects:

- Does the system meet the functional/technical requirements and demonstrated to run without errors: 85 points
- Does the submission include everything required: 13 points
- Comments: 2 points
